MANAGING INITIATIVE FOR BETTER OUTCOME

Organizations must manage their performance end to end. Starting with their strategy and being implemented through key initiatives, the performance is successful through a sophisticated value chain.

The management of the initiatives is often perceived to be the end of the food chain and an operational issue to be dealt with by project managers.

The smart organization will however keep a close eye on the initiative and how they evolve to execute the strategy.

This release of MS2C adds EVM (Earned Value Management) to the initiative functions. EVM helps project managers report the performance of their projects in a systematic way. It will help managers understand how each initiatives contributes to the performance, what financial resources they consume and what is the time to benefit.

MS2C Winter '10 release

What's new in the Winter '10 release.

- Create and manage initiative proactively by:
 - Setting the BAC (Budget at completion) expected for each initiative.
 - Planning the value (PV) of the initiative at a point of time.
 - Reporting regularly the progress of the project in term of cost (AC : Actual Cost) and schedule.
- Monitor the initiative performance through individual monitoring and portfolio monitoring.
 - Watching the CPI (Cost Performance Index) of initiatives.
 - Watching the SPI (Schedule Performance Index) of initiatives.

Install and set-up

To install the new Winter '10, just ask your administrator to deploy the new version. The new version and all its features are available to current client and new clients as part of the standard

monthly subscription.
